

Information sheet for ECTS related entry requirement

One of the entry requirements is:

- If you have not completed your degree yet, you can still apply if you have already obtained 130 ECTS in total.
- If your application is successful, you will still need to demonstrate before enrolment for the MSc Neuroscience that you successfully completed your Bachelor degree and that your degree fulfills the requirement 2 above.

If your transcript does not contain ECTS

Please apply the following algorithm for transferring non-ECTS credits

Algorithm for transferring non-ECTS credits to ECTS:

Please apply one of the following methods to transfer your credits.

Please use the first method that applies to you.

- I. If your degree is from a University from the USA: 1 US credit counts as 2 ECTS.
- II. If your transcript specifies the student workload per credit or per module (please note that student workload includes not only the amount of time you spent in class but also the time for revision of the material, to prepare for an examination, to prepare a report etc.): 25h of student work will count as 1 ECTS.
- III. If the student workload per credit is not specified on the transcript but credits on the transcript quantify workload not performance, the following procedure can be applied:

$$A = \frac{(60 * Y)}{C}$$

where

C is the total number of credits of your degree.

Y is the number of years you had to study full-time to obtain your degree.

A is the number of ECTS per credit on your transcript.

- IV. If none of the above applies please contact us at mscneuro@uni-freiburg.de
